

This product is a natural digestant that uses nature's own cleaning agents to rid grease traps and plumbing of grease accumulations. Fortified with LIPASE ENZYMES for instant action. Use it regularly to prevent clogs or back-ups and reduce or eliminate the need for unpleasant manual cleaning of traps.

Non-toxic, environmentally safe, this product uses the natural digesting power of selected bacteria strains. It helps to degrade grease accumulations by nature's own methods. Contains no harsh chemicals, no corrosive acids or caustics.

DIRECTIONS:

Traps should be cleaned before a maintenance program is started on other drains to prevent overloading. For best results, apply at evening time to allow bacteria and enzymes to work undisturbed overnight.

DIGESTASE GTD 655

GREASE TRAP DIGESTANT

A SCIENTIFIC BLEND OF BACTERIA
CULTURES, ENZYMES AND
MICROBIAL NUTRIENTS

SPECIALLY FORMULATED
TO CLEAN GREASE TRAPS
AND REDUCE PUMPING

ALL NATURAL – SAFE TO USE

Sold By:

For initial cleaning of dirty, slow or clogged grease traps of average size (about 20 cubic feet), use a 1 pound dose of this product. Dissolve in one or two gallons of warm (NOT HOT) water, and let stand for one hour. Pour this mixture into the grease trap or the nearest drain. If the grease trap is full of very hot water, flush with cold water first. Cleaning action will be faster if the floating crust in the trap is broken up before adding the digestant.

Repeat this treatment every 3 days until water flows smoothly through the trap. Commercial or institutional traps require large treatments of 2 pounds of digestant.

Traps should be maintained by weekly additions of digestant. Dissolve 1/2 pound in warm water and add directly to trap to prevent back-ups and accumulation.
